

## COMPLETE FOR OUR DESIGN AND MANUFACTURE PACKAGE

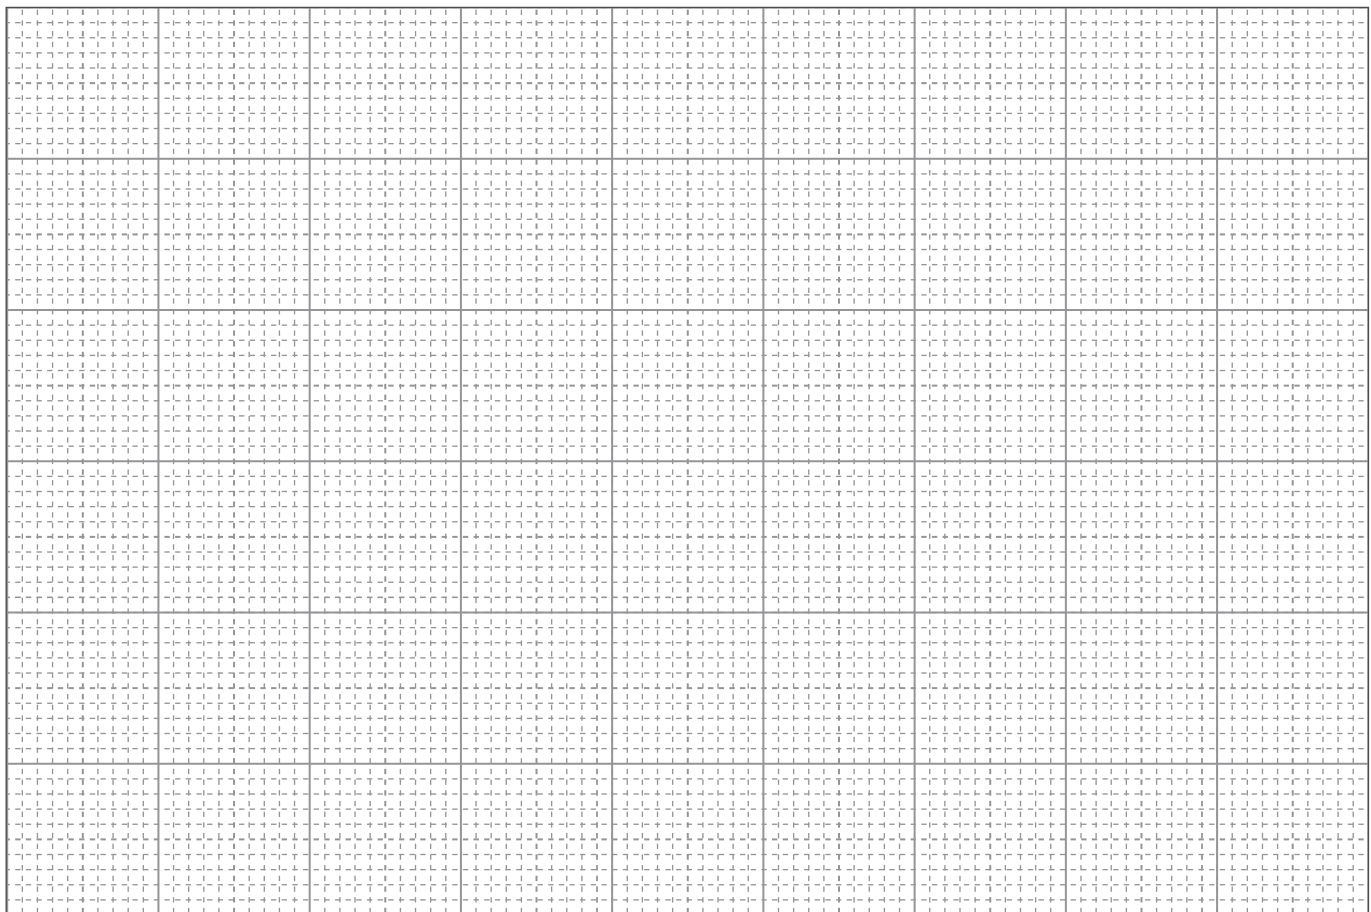

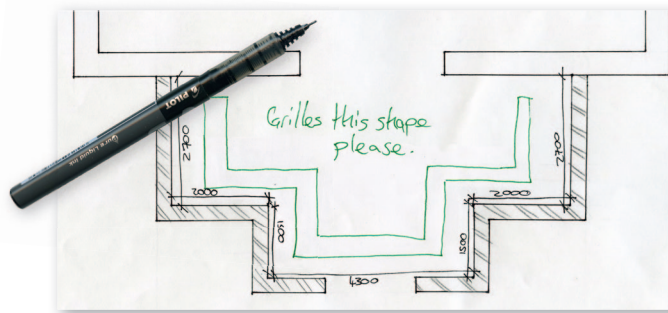

For those requiring help with the layout of your grilles, the dimensions for your trench, and would like to make the installation process as easy as possible, we offer a Design and Manufacture package.

By providing us with accurate internal dimensions of your room and an approximate design layout of the grilles, we produce a detailed CAD drawing showing layout and position of the grilles, with detailed dimensions for your builder to set out and construct the trench required for the heating elements.

The same drawing goes to produce a fully pre-manufactured frame to precise measurements, braced to form an accurate and rigid support for the grilles. The frame is dismantled into transportable and manageable sections for easy reassembly on site.

Charges for this service are available on request and are dependent on the scale of the room and complexity of the design layout.
